2-Classes + 1-Week = a Lifetime Opportunity

Small Engine Repair: 4-Stroke Engines.

Lawnmowers, edgers, generators, concrete tampers, go-carts, mini-bikes all have one thing in common - they all run on 4-stroke engines. This course will take you through the steps of tearing down and rebuilding an engine. From carburetors to flywheels.

Stroke Engines.

From tune-ups to troubleshooting and rebuilding. We take a 2-day look at 2-stroke engines. You'll dismantle one then put it all back together. The principles learned here will help you with chain saws, weed whackers, back pack blowers and more!

To enroll, make the call now!
